

VDSR v 1.2.0 Release Notes

Customer	All		Via	
Project	VDSR		ID	
Revision	0	Software Version	1.2.0	Date 07/24/2017
Preparer	STW / arojas			

Bug Fixes:

- Fixed bug where text gauge only allowed for a limit of 15 mappings
- Fixed graphical change where top navigation bar would be out of field of view when entering the admin section.
- Could not add a new CAN Open device using the local configuration.
- Fixed an issue with the refresh rate changes not saving on diagnostics.
- Fixed missing validation on duplicate variable names when importing from DBC file.
- Fixed an issue with the local config section for CAN Open where a pop up did not open when an EDS file had not been previously uploaded to the device.
- Fixed issue with not saving variable selection properly in the CAN Open reader when using the local configuration.
- Issue where the horizontal LED gauge did not display major tick marks correctly.
- Issue with not displaying correctly the online status for devices in the log files section.
- Issue with the proprietary SPN not being selectable on local J1939 config.
- Issue with CAN writer information loading on the page intermittently.
- Issue where a client group could not be moved under a different department group.
- Fixed issue where compressed log files would not transfer to the VDSR server.
- Issue with the group tree displaying out of order when creating a new device.
- Ethernet information not displayed correctly for EB07 systems.
- Missing big endian validation for the CAN reader.
- Issue with a log job disappearing after being edited.
- Save button stayed disabled after variables were selected in the log job create pop up.
- General other improvements.

Features/Enhancements:

- Changed layout of navigation bar and buttons to allow for a cleaner look and increase the page real estate.
- Changed the location of the map widget to be included all in one place together with the device list.
- Changed the groups list location from the navigation menu bar to a link button on the dashboard and as part of the content on the admin page.
- Minor button and link changes for a simpler more consistent navigation feel.
- Added device software version to device list in the Admin section
- Added a sticky back-to-top button.
- Made the stat/stop apps button and device update button close automatically when clicking outside of their respective pop ups.
